

# Public Health Reports

Treasury Department, United States Marine-Hospital Service. Published in accordance with act of Congress approved February 15, 1893.

---

VOL. XIII.      WASHINGTON, D. C., OCTOBER 21, 1898.      No. 42.

---

## UNITED STATES.

### *Yellow fever in the South—(Continued).*

Since the last report, yellow fever has been reported at the following new places:

LOUISIANA.—Cinclare, Iberville, East and West Feliciana, Litcher, and St. Charles Parish.

Light frost was reported as occurring at the following places on the night of the 13th: Holly Springs, Columbus and Starkville, Oxford, Miss. On the 17th, at Franklin, La., and New Orleans, La.

October 12. All quarantines were raised between New Orleans and infected points in Louisiana and Mississippi.

October 20. All quarantines established by the Tennessee State board of health were ordered raised, to go into effect October 21.

October 18. Surgeon Carter reports his work since October 12, as follows:

NEW ORLEANS, LA., *October 18, 1898.*

SIR: I have the honor to submit the following report of the work done in this vicinity since my last report, October 12, 1898:

October 13. Camp Hutton opened; Passed Assistant Surgeon G. M. Magruder in command, Assistant Surgeon C. H. Lavinder and Acting Assistant Ahrens with him.

October 14. Surgeon Carter at Oxford in conference with Surgeon Murray and Passed Assistant Surgeon Cobb, is inspecting the work there. Von Ezdorf seems, from the temperature chart, to have had a relapse of yellow fever; doing well. Agreed to stop disinfection at Orwood and (save a few houses) at Taylors as unnecessary. The few foci at Water Valley and those in Oxford will be treated. Have had light frost here.

October 16. Assistant Surgeon Cummings finished work at Jackson, Miss.; that is, cordon around infected portion of city. He goes to

Oxford to assist Passed Assistant Surgeon Cobb. Surgeon Carter goes to Meridian on request of State board of health of Meridian to examine cases of suspicious fever.

October 17. Surgeons Murray and Carter examine 2 cases in question and find them yellow fever. Board of health believe infection from Hattiesburg. Weather is so cold that new foci will not establish in Meridian.

October 18. Great need of relief measures at Poplarville, Clinton, and Madison. Surgeon Murray stays two days in Meridian. Carter returns to New Orleans. The weather now is cold enough (save possibly in the extreme south) for us to expect no new foci to be formed. New cases will, of course, develop from exposure to foci already established, but no new foci of infection will be established by these cases.

*Train inspection service.*

All inspectors have been withdrawn from the roads centering at Chattanooga, viz, Atlanta and West Point, Southern, Western and Atlantic, Alabama and Great Southern, and Memphis and Charleston; also from the following additional roads in northern Alabama, viz, Southern, Georgia Pacific, and Louisville and Nashville.

The inspectors have been also withdrawn from the roads entering, or traversing Western Tennessee, viz, Illinois Central, Kansas City, Memphis and Birmingham, Louisville and Nashville, Memphis and Charleston, Mobile and Ohio and Nashville, Chattanooga, and St. Louis. The inspection stations hitherto maintained, for the inspection of the crews of steamboats from New Orleans at the mouth of the Red River and near Vicksburg have been discontinued.

The disinfection of freight at Jackson, Miss., has been suspended.

*Yellow fever in the United States as officially reported from July 1 to October 20, 1898.*

[Reports to the Supervising Surgeon-General, United States Marine-Hospital Service.]

*Quarantine raised between New Orleans and State of Mississippi.*

[Proclamation.]

NEW ORLEANS, LA., *October 12, 1898.*

Whereas, The prevailing fever is noticeable for its mildness, and considering the lateness of the season, be it ordained that—

(1) All quarantines are raised between all points in the State of Mississippi and the city of New Orleans on the part of the State of Louisiana.

(2) Quarantine is raised from the parish of St. Mary (except Franklin), viz: Berwick, Patterson, Clumet, Bayou Sale, Baldwin, and Adeline stations.

EDMOND SOUCHON, M. D.,

*President Louisiana State Board of Health.*

*Investigation of supposed case of yellow fever at Varner, La.*

Report having been received at the Bureau of a suspicious case of fever at Varner, Dr. William Krauss was engaged to investigate and report on the case. His report is given below:

MEMPHIS, TENN., *October 11, 1898.*

SIR: I have the honor to report my investigation of a case of suspected yellow fever at Varner. The patient, J. W. Stitt, section hand, has never been out of the county, and there is no reasonable way for infection to have been carried there. Varner is on a branch of the Iron Mountain Railroad, which terminates at Alexandria, La., and is a town of about 50 inhabitants, situated in a swampy region.

Patient had been in bed at the depot hotel since Friday, September 30, and, although half the population have been exposed to him from the beginning, there is no other sickness in the place.

The clinical history being somewhat interesting, although hazy, I will give it somewhat in detail.

Patient, aged 25 years, robust frame, has been suffering from malarial attacks all summer; had dysentery about a month ago. He had been drinking for several days, and would vomit bilious matter on the street. Captain Rice, the mayor, advised a physician. Patient had a chill on evening of September 30, followed by no perceptible fever, was vomiting excessively, went to stool frequently as result of calomel taken, hence saved no urine for inspection. Jaundice gradually developed, which was of a pale rather than a bronze hue. If the urine had

been inspected and found bloody this would have given the classical triple symptom of malarial hematuria. Dr. Worley saw him about this time (third day) and found urine suppressed, nausea, and excessive vomiting, subnormal temperature, and a weak pulse of 60. Nausea and abstention from alcohol would account for this. Dr. Price, a recent graduate, saw patient daily after this; vomiting continued, urine very scanty, highly albuminous, straw colored, no fever; symptoms of uremia, jaundice gradually disappearing.

I found him in about that condition. Temperature 99°, pulse 78 full and hard, slight symptoms of uremia, no headache or backache, spleen slightly and liver greatly enlarged, a large blister over abdomen preventing the eliciting of visceral tenderness on pressure. The tongue was broad and heavily coated, breath fetid, much salivation, upper lip swollen, still nauseated. Cutaneous hyperemia, active, not venous. Examination of blood showed estivo-autumnal plasmodia-small, hyaline, unpigmented, often three in a corpuscle. The corpuscles were diminished in number and very pale (made no estimation), some nucleated, as I have found numbers of times in convalescents from malarial hematuria. Urine was pale, scanty, highly albuminous, but casts were granular, *not epithelial*.

The local officers of the Iron Mountain furnished transportation from Pine Bluff to Varner and back to Little Rock. If there had been time between trains I could have arranged for transportation all the way. I reported to Dr. Dunnivant, of Arkansas board of health, and returned to Memphis with much loss of time both ways, as railroads only run one train and that out of schedule.

Very respectfully,

WM. KRAUSS.

*Smallpox in Wausau, Wis.*

MILWAUKEE, WIS., October 12, 1898.

SIR: In compliance with the agreement embodied in resolutions adopted by the conference of State and provincial boards of health respecting interstate notification of the occurrence of communicable diseases, you are hereby informed that 1 case of smallpox (variola) has been reported to this office as existing in Wausau, Marathon County, in this State. The patient (male) came from the lumber camps in Oneida County, this State. Strict quarantine is maintained. Danger from spreading slight.

Very truly, yours,

U. O. B. WINGATE, *Secretary*.

*Smallpox in Huntersville (Norfolk), Va.*

NORFOLK, VA., October 18, 1898.

SIR: I have the honor to inform you that 4 cases of smallpox were discovered in Huntersville, a suburb of this city, on Sunday night, and were sent to the county pesthouse. The other occupants of the house, save 2 who escaped, are being quarantined.

There has been no further case of variola in this city since my last report, and the patients, 11 in all, are in the city pesthouse and doing well.

A general vaccination was ordered and is progressing rapidly.

Respectfully, yours,

EDWD. E. FEILD,  
*Acting Assistant Surgeon, U. S. M. H. S.*

*Current quarantine measures.*

[Translated in this Bureau from the "Veröffentlichungen des Kaiserlichen Gesundheitsamtes," Berlin, September 28, 1898.]

NETHERLANDS.—The royal order of July 27, 1895, in regard to protection from contagious diseases, was repeated August 24, 1898. The measures of protection therein formulated are made to extend to plague, and are in conformity with the measures prescribed by the Venice Conference of March 19, 1897.

BRITISH EAST INDIES.—According to advices of September 1, the Government of Bombay has issued three orders relative to measures—(I) against outgoing vessels; (II) against incoming vessels, and (III) measures applicable to Bombay.

The measures for incoming vessels went into force September 1; those relative to outgoing vessels were to be put in force from some date thereafter to be named. The measures relative to Bombay are already in operation.

## I. OUTGOING VESSELS.

No vessel shall leave the port without official certificate that the master, crew, and passengers have been examined on land, by daylight, and have been found free from plague. In the case of a vessel which starts on its voyage without having held communication with the city, the medical inspection shall be confined to those persons who have shipped from Bombay. Foreign consuls are invited to be present at such examination.

Plague suspects and their effects are prohibited shipment. On order from the competent authorities they will be held under supervision and their effects disinfected. This action shall be noted in the ship's papers.

After the issuance of sanitary certificates no further admissions of passengers or merchandise shall be permitted.

The medical inspection shall take place between the hours of sunrise and sunset.

If the vessel sets sail after 6 o'clock in the morning, a second examination must be made. This shall take place on the vessel itself only in case no communication has been held between the vessel and the shore.

## II. INCOMING VESSELS.

The captain of any vessel which arrives from an infected port, or which has held any communication other than verbal or by signal with a vessel from a plague-infected country, or which has plague on board or on which there were cases of plague twelve days before arrival, shall make the required quarantine signals by day or night.

All communication other than verbal with the shore or other vessels is prohibited except in the case of the pilot or port officials.

Every vessel destined to Bombay shall be inspected and if found to be clean shall be permitted to unlade.

The same holds good for vessels touching at Bombay. Should such vessels be declared unclean, no communication with the shore or with other vessels shall be permitted without authority from the health authorities.

Inspection of vessels shall in all cases take place between sunrise and sunset.

Plague vessels, or vessels which have had plague cases on board during the twelve days before their arrival, shall be subject to the following rules:

(1) The sick shall be landed and at their own cost placed under regular medical care.

(2) Persons not sick shall be removed from the vessel for the purpose of medical supervision. Persons indispensable to the service of the vessel shall be allowed to remain on board under supervision.

(3) Suspicious articles shall be disinfected.

(4) The vessel shall take on fresh water and pump out the bilge water.

(5) The vessel shall be thoroughly disinfected.

(6) After fulfillment of these requirements, the vessel shall haul down quarantine signals.

Vessels which are suspect, that is to say, vessels on which plague cases occurred at the time of departure or during the voyage, but on which there has been no plague cases within twelve days of arrival, are subject to the following measures:

Passengers and crew shall be examined and thereafter be subject to rules 3 and 6 of measures for infected vessels. Crowded vessels shall be treated as suspicious.

A vessel which refuses to comply with these requirements may leave the port; but if it has begun to unlade it shall be held subject to the measures stated above.

## III. REGULATIONS APPLICABLE TO BOMBAY PROPER.

(1) As regards the treatment of plague in Bombay, the carrying out of the order prepared under direction of the Government, which in this case is represented by the plague commission, is in the hands of the municipal commissioner of the city. The municipal commissioner has the authority to appoint officers, to inspect suspected localities, and apply such measures as he judges necessary; to overlook the water supply; to order inspection and disinfection of houses in which plague cases occur; to order the demolition of buildings when circumstances require it, and to destroy all articles capable of conveying infection. The police authorities are directed to cooperate with the sanitary authorities in carrying out such measures as are required.

## AFRICA.

*Smallpox at Pretoria and Natal.*

CAPE TOWN, September 3, 1898.

SIR: I have the honor to call your attention to the following:

At Pretoria, South African Republic, smallpox has broken out among the coolies and several cases are reported. But few, if any, whites thus far affected. The Government enforces vaccination, and citizens are allowed fourteen days and farmers one month in which to vaccinate. The state of affairs is pronounced serious, and public meetings are being held to bring pressure to bear upon the "smallpox committee." One speaker stated that "the disease was spreading so rapidly that the whole town would be in quarantine unless prompt measures were taken." In Natal the disease has appeared among the natives, and the Government is using heroic measures. The compulsory vaccination of whites has not yet been ordered, but vaccination is urged. All natives are being vaccinated, and none can leave the colony without a pass. It is stated that no fewer than 4,600 natives went out of the colony before the order was issued. All natives reentering the colony undergo a most thorough examination. Complaints are made of bad lymph, but this the Government denies. From the Orange Free State a correspondent writes that smallpox has broken out and appears to be of a most deadly nature, and up to the present 3 whites and 1 native have died; that there is not a supply of virus. Only 1 case in Cape Colony is reported. The several Governments are active and taking steps necessary to stamp out the disease.

I have the honor to be, sir, your obedient servant,

J. G. STOWE,

United States Consul-General.

Hon. THIRD ASSISTANT SECRETARY OF STATE.

## MEXICO.

*Yellow fever in Jimenez.*

CONSULATE OF THE UNITED STATES,  
*Matamoras, Mexico, September 28, 1898.*

SIR: I have the honor to report for the information of the Department of State that yellow fever now exists at Jimenez, which is about 100 miles south of here, in this consular district.

Many pernicious types of fever, such as intermittent, remittent, and malarial, are almost constantly prevalent here, and at present the meteorological conditions are especially favorable to sickness. The sanitary conditions of Matamoras, however, are above the average, and the authorities here are enforcing a strict quarantine against Tampico, Victoria, Jimenez, and all places south, in order to prevent the disease spreading into the United States through this city.

I am, sir, your obedient servant,

P. MERRELL GRIFFITH,  
*United States Consul.*

HON. ASSISTANT SECRETARY OF STATE.

## STATISTICAL REPORTS.

BAHAMAS—*Dunmore Town*.—Two weeks ended September 23, 1898. Estimated population, 1,472. Total number of deaths, 1. No contagious diseases.

*Governors Harbor*.—Two weeks ended September 24, 1898. Estimated population, 1,500. No deaths and no contagious diseases.

*Green Turtle Cay—Abaco*.—Two weeks ended September 22, 1898. Estimated population, 3,900. No deaths and no contagious diseases.

*Nassau*.—Two weeks ended October 4, 1898. Estimated population, 11,000. Total number of deaths not reported. No contagious diseases.

BERMUDA.—Two weeks ended October 7, 1898. Estimated population, 15,013. Total number of deaths, 2. No contagious diseases.

CHILE—*Antofagasta*.—Month of August, 1898. Estimated population, 14,000. Total number of deaths, 40, including 7 from phthisis pulmonalis.

DENMARK.—Month of August, 1898. Estimated population, 2,286,500. Total number of deaths, 13,596, including diphtheria, 493; enteric fever, 256; measles, 233; scarlet fever, 373; whooping cough, 1,756, and 367 from phthisis pulmonalis.

FRANCE—*Rouen*.—Month of August, 1898. Estimated population, 112,657. Total number of deaths, 419, including diphtheria, 1; enteric fever, 5; measles, 1, and 53 from phthisis pulmonalis.

GERMANY—*Dresden*.—Month of September, 1898. Estimated population, 385,300. Total number of deaths, 701, including diphtheria, 3; enteric fever, 2; measles, 3; scarlet fever, 1; whooping cough, 4, and 35 from phthisis pulmonalis.

GREAT BRITAIN—*England and Wales*.—The deaths registered in 33 great towns in England and Wales during the week ended September 24

correspond to an annual rate of 23.6 a thousand of the aggregate population, which is estimated at 11,218,378. The highest rate was recorded in Gateshead, viz, 38.7, and the lowest in West Ham, viz, 16.2.

*London.*—One thousand eight hundred and sixty-three deaths were registered during the week, including measles, 12; scarlet fever, 9; diphtheria, 29; whooping cough, 31; enteric fever, 9, and diarrhea and dysentery, 347. The deaths from all causes correspond to an annual rate of 21.6 a thousand. In greater London 2,518 deaths were registered, corresponding to an annual rate of 20.5 a thousand of the population. In the "outer ring" the deaths included 12 from diphtheria, 6 from measles, and 8 from whooping cough.

*Ireland.*—The average annual death rate represented by the deaths registered during the week ended October 1 in the 23 principal town districts of Ireland was 24.4 a thousand of the population. The lowest rate was recorded in Carrickfergus, viz, 5.8, and the highest in Tralee, viz, 78.3 a thousand. In Dublin and suburbs 165 deaths were registered, including enteric fever, 4; scarlet fever, 1; whooping cough, 5, and typhus, 1.

*Scotland.*—The deaths registered in 8 principal towns during the week ended October 1 correspond to an annual rate of 19.1 a thousand of the population, which is estimated at 1,568,536. The lowest mortality was recorded in Leith, viz, 15.7, and the highest in Paisley, viz, 28.2 a thousand. The aggregate number of deaths registered from all causes was 577, including diphtheria, 4; measles, 6; scarlet fever, 11, and whooping cough, 17.

*NOVA SCOTIA—Windsor.*—Month of September, 1898. Estimated population, 3,000. Total number of deaths, 2, including 1 from phthisis pulmonalis.

*ST. HELENA.*—Four weeks ended September 3, 1898. Estimated population, 4,000. No deaths and no contagious diseases.
